AUDITABLE OPTIONS INTELLIGENCE

ALPACA AI TRADING AGENTS HACKATHON

Markets disagree. We verify the trade.

Six markets. One governed decision.

Defined-risk options with entry and exit rules fixed in advance.

OMOBOLAJI E ADEYAN

ALPACA PAPER TRADING • AUDITABLE ENTRY • GOVERNED EXIT

Trading agents generate signals. Few can defend a decision.

01

Fragmented

Single-market analysis misses information moving between rates, credit and equities.

02

Unaccountable

LLM conclusions are difficult to reproduce, challenge or audit after the outcome.

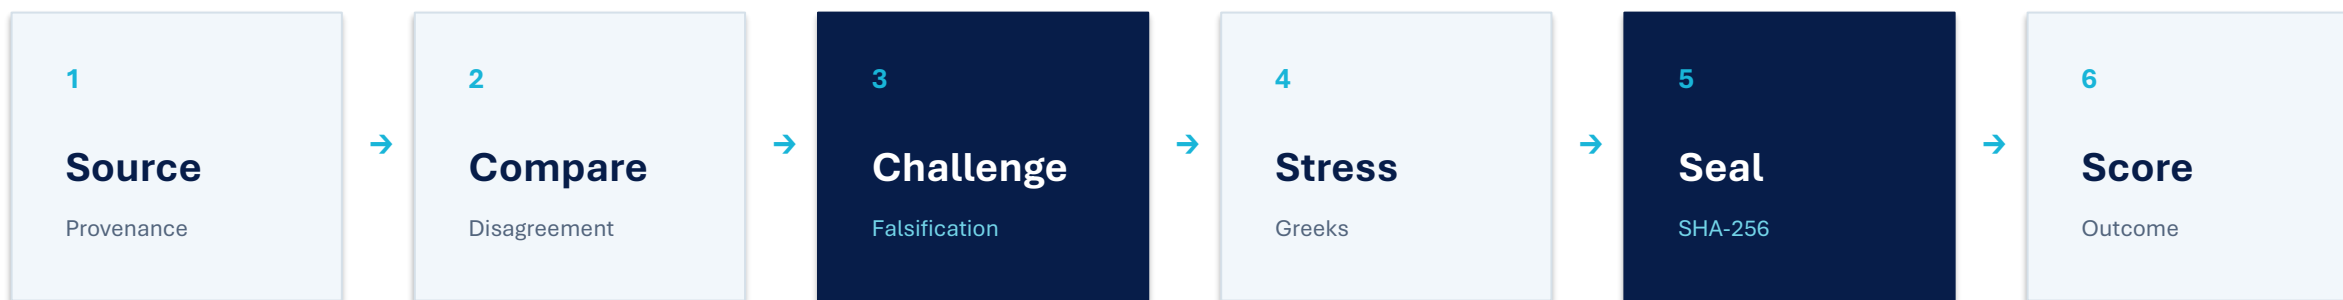

03

Unmanaged

Many agents govern entry but provide no explicit profit, loss, time or expiry exit policy.

A scientific proof chain for every trade

The SIGNAL protocol turns a thesis into a governed, falsifiable decision.

ABSTAIN is a successful outcome when evidence or execution quality is insufficient.

Alpaca is the market and execution backbone

LIVE EVIDENCE

- Stocks and options
- Quotes, volume and Greeks
- Account and positions
- Alpaca News context

CROSSIGNAL

- Claude macro synthesis
- Deterministic construction
- Risk and stability gates
- Sealed Decision Contract

PAPER LIFECYCLE

- All-leg preflight
- Take-profit and stop-loss
- Time and expiry exits
- Fresh quotes, broker reconciliation, atomic close

One scorecard. A decision that defends itself.

Signal strength never gets to hide weak execution evidence.

WHO NEEDS IT

- Active options traders
- Small investment teams
- Broker and platform providers
- Risk and compliance teams

HOW IT GROWS

- 01 Professional SaaS
- 02 Team governance
- 03 Broker partnerships
- 04 Enterprise policy APIs

VALUE

**Faster
review.
Stronger
trust.**

THE PROOF IS PUBLIC

Inspect the intelligence. Challenge the decision.

59

automated tests

4

sealed exit rules

13/15

latest full checks

**CrossSignal proves when a trade deserves entry—
and manages exactly how it exits.**
